LIGHT MATERIAL BUCKET (MRT)

- Bucket dedicated to the handling of light materials (<math>< 1000 \text{ kg/m}^3 / 62 \text{ lb/ft}^3</math>).
- Reinforced structure (base, blade and sides).
- Usually placed in from on a window/ an opening on a deconstructed building to load rubbles.
- Especially usefull for deconstruction applications: the wide opening of this bucket prevents rubbles & misc. materials from falling to the ground.
- Designed to suit to MRT's specific boom head position.
- Note: rotating telehandlers are not designed for intensive loading applications.

R-EVOLUTION TILTING FORK CARRIAGE

- Major increase of your MRT's functionality thanks to a continuous 360° fork rotation.
- 2 capacities: Up to 5000 kg / 11025 lb frontal (+/- 15°) and up to 2500 kg / 5513 lb rotated.
- Note: road circulation kit mandatory in Germany and Italy on MRT Vision+. Contact your dealer.

[The 3D picture at the top of this page is the reference CAT 1200 / 5000 R B - 52629990].

- Easy handling of long loads in narrow spaces.
- Space saving: better pallet management= less storage space used.
- Reduce machine movements & maneuvers = Fuel consumption savings.
- Safety: constant monitoring of the load's weight, angle & position ; adaptive overload control according to the load's position; no forward tilting if rotation > 120° and boom lifted over 3 m / 10 ft high.
- Cost saving: limits machine movements & maneuvers = lower fuel consumption.
- Space saving: better pallet management= less storage space used.

MANDATORY MACHINE EQUIPMENT: 

Manitou is offering, as standard, the attachment recognition system on its new-generation of rotary telescopic trucks MRT.

The system uses RFID radio-identification technology, very widely used in industry and retail. This autonomous technique can remotely recover and record data. The machine detects the attachment at the head of the boom, analyses its data and directly proposes the corresponding working configuration (working envelope + movement speed + safety).

This technology provides the load chart in real time, taking into account the rotation angle of the turret and the position of the machine's stabilisers and in accordance with the mobile crane standard.
